Understanding Hard Hat Types

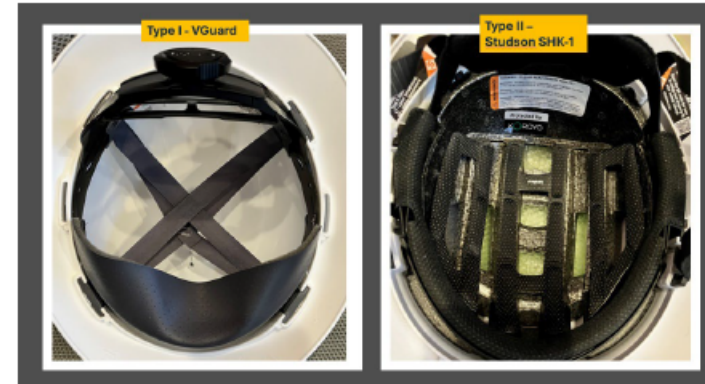

- **Type I:** Protects against vertical impacts from falling objects.

Type II: Offers enhanced protection against lateral impacts as well as vertical impacts, shielding the head from blows from the side, front, and back.

Embracing the Future with Class II : Remember, the appearance of the helmet does not determine its classification. But rather the directional impact protection it offers when worn properly. A person can generally tell the difference by looking at the guts, but even then, to confirm ALWAYS check the required markings or the Manufacturer's instructions.

Why This Matters

- **Enhanced Safety:** Class II helmets provide superior protection against a wider range of impacts.
- **Modern Design:** Incorporates the latest technology for better performance and comfort.
- **Our People Matter:** Let's embrace this change together for a safer working environment.

LIFE-SAVING RULES
